

Middle shop — I handle, Direct, reveal, group chat

Example: Kavita = supplier · Ravi = trader · Meena = buyer

First time this pair meets: **I handle**, they **do not** see each other, **no group**.

The four words

Word	Meaning
I handle	Meena’s order is with Ravi .
Direct	Meena’s order is with Kavita . Ravi still sees that order.
Reveal	Kavita and Meena can see each other’s shop names .
Group chat	One chat: Kavita + Ravi + Meena. Order updates sit here.

Reveal off → two private chats (Meena–Ravi, Ravi–Kavita). No group.

Reveal on → we create the **group**. Group only if they can see each other.

What happens

Setup	Order is with	Meena sees	Kavita sees	Where they talk
I handle , no reveal <i>(default)</i>	Ravi	Only Ravi	Only Ravi	Two private chats
I handle , reveal	Ravi	Ravi + Kavita	Ravi + Meena	Group
Direct , no reveal	Kavita	Kavita (not Ravi in her order chat)	Meena	Meena–Kavita private. Ravi sees the order on his list.
Direct , reveal	Kavita	Ravi + Kavita	Ravi + Meena	Group

Same supplier + same buyer: we **remember** this. Next order follows it until Ravi changes it.

Change via **More** on share/order, or **Your paths** — not on every share screen.

Group name = three shop names. Same group next time (including if staff change).
